

Navneet Verma

Software Engineer | Full Stack | Backend | Infrastructure | DevOps

Nepal | vnavneet631@gmail.com | 9864071507

LinkedIn | GitHub

Professional Summary

Software Engineer with around 3 years of experience building, testing, deploying, and maintaining full-stack web applications and backend systems. Strong background in backend engineering, database design, background processing, infrastructure, and DevOps, with hands-on experience across frontend development, APIs, integrations, deployments, and production systems. Experienced with Node.js, TypeScript, NestJS, PostgreSQL, MongoDB, Redis, Docker, Linux, Nginx, and GitLab CI/CD.

Education

BSc (Hons) Computer Science

Herald College Kathmandu – University of Wolverhampton

Expected 2027

Nepal

Experience

Full Stack Engineer

Nomor LLC / Protozoa Host

Jun 2025 – Present

Kathmandu, Nepal

- Build and maintain full-stack web applications across frontend interfaces, backend services, APIs, databases, integrations, and production infrastructure.
- Develop application features and business workflows using TypeScript, JavaScript, Node.js, NestJS, PostgreSQL, MongoDB, Redis, React, and Next.js.
- Design and implement APIs, database-backed features, authentication and authorization, background processing, third-party integrations, and application infrastructure.
- Build asynchronous processing with BullMQ, transactional outbox patterns, retries, dead-letter handling, scheduled jobs, and idempotent workers.
- Debug and resolve frontend, backend, database, integration, queue, and production issues across existing codebases while maintaining application behavior and data integrity.
- Handle deployments and server configuration across Linux and VPS environments using Docker, Nginx, SSL/TLS, DNS, and GitLab CI/CD.
- Work across client and contract projects, taking features from implementation and testing through deployment, debugging, and production maintenance.

Selected Projects

Skoolsewa – School Management System

NestJS, TypeScript, PostgreSQL, Drizzle ORM, MongoDB, Redis, BullMQ, React, Next.js, Docker

Full Stack / SaaS

- Built full-stack school-management functionality covering students, staff, classes, attendance, leave, exams, results, timetables, assignments, notices, ID cards, and data transfer.
- Developed frontend workflows and backend APIs while designing database models, business rules, authorization, integrations, and background processing.
- Implemented database integrity using GiST exclusion constraints, partial unique indexes, advisory locks, append-only triggers, and 33 migrations with reversible down-migrations.
- Built transactional-outbox processing with 10+ BullMQ queues, deterministic job IDs, dead-letter replay, lease and reaper handling, idempotent workers, and multi-channel notifications.
- Implemented role-based and object-level authorization across six actor types, with request validation, typed error codes, anti-enumeration behavior, and database integration testing.
- Built backup, restore, and deployment workflows using PostgreSQL tooling, HMAC-signed artifacts, GitLab CI/CD, PgBouncer, Docker Compose, and VPS infrastructure.

WordUnscramble.ai – Word Search Platform

NestJS, TypeScript, PostgreSQL, MongoDB, Redis, BullMQ, Next.js, GitLab CI/CD

Full Stack / Production

- Built and deployed a full-stack word-search platform with a 131K+ word dictionary supporting wildcard search, anagrams, Wordle, Jumble, Scrabble, and word-finding tools.
- Developed application interfaces and backend APIs while designing the search engine using 26-bit letter masks, letter-frequency vectors, wildcard matching, positional filtering, bounded result sets, and deterministic cache keys.
- Built a streaming dictionary-import pipeline with chained BullMQ jobs, backpressure, staged Redis cache replacement, integrity checks, and stale-job recovery.

- Implemented server-authoritative game sessions with Redis state, MongoDB leaderboards, atomic completion handling, and timing-based validation.

CRM and Content Management Platform

Full Stack / CMS

Payload CMS, Next.js, PostgreSQL, React, SEO, Custom Analytics

- Built a full-stack Payload CMS-based CRM with reusable content blocks, structured pages, blog management, media handling, and configurable SEO metadata.
- Developed frontend content and management workflows alongside CMS collections, backend logic, database integration, and media management.
- Implemented custom analytics for event tracking, sessions, heatmaps, user behavior, reporting, and A/B testing.

Shopit Nepal

Full Stack / Quick Commerce

Next.js, React, Backend APIs, Database, Admin Panel, Integrations, Deployment

- Built and maintained a full-stack quick-commerce platform covering the customer-facing web application and an administrative management panel.
- Developed product, category, inventory, cart, ordering, customer, and operational workflows across frontend interfaces, backend APIs, business logic, and database-backed services.
- Implemented admin workflows for managing products, inventory, orders, customers, and platform data, with role-based access and validation across operational functions.
- Integrated third-party services and backend processes while handling application configuration, deployment, debugging, and production maintenance.

Technical Skills

Languages: TypeScript, JavaScript, SQL

Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, NestJS, REST APIs, Webhooks, Server-Side Applications, Swagger / OpenAPI

Databases: PostgreSQL, MongoDB, Redis, Drizzle ORM, Database Modeling, Query Optimization

Distributed Systems: BullMQ, Transactional Outbox, Dead Letter Queues, Event-Driven Systems, Background Jobs, Job Scheduling, Retries, Idempotency, Backpressure, Distributed Locks

Caching and Data Processing: Redis Caching, Cache Invalidation, Deterministic Cache Keys, Streaming Pipelines, Batch Processing

Infrastructure and DevOps: Docker, Docker Compose, Linux, VPS, Nginx, SSL/TLS, DNS, Reverse Proxy, Server Configuration

CI/CD and Testing: GitLab CI/CD, Jest, Unit Testing, Integration Testing, End-to-End Testing, Database Testing, SQL Constraint Testing

Cloud and Integrations: S3-Compatible Storage, Firebase FCM, Resend, SMTP, SMS Gateways, Third-Party APIs

CMS and Documentation: Payload CMS, Fumadocs, SEO, Content Management Systems, Web Analytics, A/B Testing

Computer Science: Data Structures and Algorithms, Database Systems, Software Architecture and System Design (HLD,LLD)
